4<sup>th</sup> of September 2020, Venlo

To whom it may concern

Patient information

Patiënt: Dark brown stallion foal Pellegrino HV (Harley VDL x Lancelot), 23-04-2020, KWPN 20.02183.

On the 3th of August 2020 the foal mentioned above of the Fam. Hesen-Vossen was seen at the clinic to evaluate the foot conformation.

The foal was seen by my colleague L.W.E Peters and blacksmid G. de Crom to evaluate the uneven feet with the following findings.

Visual inspection showed a normal foot pastern axis of the right front foot. The right front foot is smaller compared to the left front. From behind the heels are of even height and touch the ground.

Conclusion: the right front is not a clubfoot

In case of any further questions, please feel free to contact us: +31(0)77-366.30.53

Kind regards,

Visual inspection
